

ATS Suite Manual Installation Instructions

The following Instructions are only necessary if the ATS Installer did not successfully install ATS to your MetaTrader 4. If ATS is on your MetaTrader 4 following you running the ATS Installer, then you will not need to go through the following steps. This process is simply dragging and dropping the ATS files into your MT4 of choice. ***The files must be placed in the exact locations listed to work properly.***

1. Open MetaTrader 4
 - a. Navigate to File > **Open Data Folder**.
 - b. Close MT4 when you have the **Data Folder** window open.
2. Open the **ATS Manual Installation** Folder. We will now drag and drop the Files from the **ATS Manual Installation** Folder into the **MetaTrader 4 Data Folder**.
3. Drag and drop all files in the **"ATS Templates"** folder into **"Templates"**.
4. Double-click **"MQL4"** to view its contents.
5. Drag and drop all files in **"ATS Assistant Files (Experts)"** into the MT4 **"Experts"** Folder.
6. Drag and drop all files in **"ATS Core Files (Indicators)"** into the MT4 **"Indicators"** Folder.
7. Drag and drop all files in **"ATS Libraries"** into MT4 **"Libraries"**.
8. Close both Windows
9. Open MT4 and verify that you see ATS files under **"Indicators"** and **"Expert Advisors"** in the Navigator Menu. (Navigator is the Folder Icon listed in the top left MT4 menu bar).
10. Drag and drop ATS V4.0 or ATS Assistant 2.0 from the Navigator list onto blank charts of your choice, making sure to enable **"Allow DLL Imports"** under the **"Common"** tab in the window that appears after dropping the Indicators onto the chart.

Please reach out to Support@tradeats.com if you have any questions.
